OPENLBM LICENSING IN PLAIN WORDS

Fair source. Free for the dealer it is built for.

One standard, six licences, applied per component, so independent operators keep what they build and the commons stays theirs.

YOUR RIGHTS

- Run it for your own yards, free, forever.
- Read and modify any part of the system.
- Keep your changes private as an independent operator.
- Run it on your own hardware or with the host you choose.
- Build integrations and add-ons under any licence.
- Your data and your copy of the software stay yours.

COMMONS PROTECTIONS

- Closed commercial SaaS vendors cannot repackage it as a rival product.
- Distributed modifications must share source code.
- Community marks and brand identity are preserved.

THE SIX LICENCES

Commons	The backend: free forever; modifications stay private for independent operators.
Surface	The desk and role apps: modify freely for your team.
Connector	The SDK and API client: build any integration, open or closed.
Community Source	AI dispatch and advanced portal features: shared among members.
Documentation	Guides and specifications: open reference material.
Trademark	Brand protection: ensures authentic Gable distributions.

CONTINUITY

If no new release ships for 24 months, or the licensor dissolves without naming a successor, the sharing conditions fall away and the code may be used under the Connector terms.
