

WHY GABLE

Built for the dealer who plans to still be here.

Your data, your deployment, the code in your hands, and an owner that cannot be bought.

YOUR DATA

The database	PostgreSQL with a documented schema and a real double entry general ledger.
Where it runs	In your cloud, on your own premises, or with a managed host.
Sign in	Connect your existing company sign in.
Portability	Direct access to your own database; nothing locked behind an export fee.
Security	Strict origin checks and credentials sealed at rest.

YOUR CODE

The whole system	The full ERP, yours to run; private changes stay private.
Build on it	Add-ons and automation through the open SDK, under any licence.
Modules	Turn modules on or off, and grant each one per person.

OWNERSHIP

Owned by operators. Protected from capture.

Dealer veto	An independent dealer panel holds veto power over licence terms and governance.
Two locks	FutureBuild can never capture or sell the commons, and the community can never lock FutureBuild out.
Capital	No private equity, no venture capital.
